

Incident Command Course **COMMAND-Pro**

Health and Safety Sciences, LLC offers a real-world based Incident Command **COMMAND-Pro** course utilizing our model industrial plant coupled with high-stress scenarios guaranteed to exercise students command and control ability. The model industrial plant is a scale model of a modern industrial facility with residential and commercial exposures at the property lines of the facility.

Class size for the **COMMAND-Pro** program is capped at 15 students to ensure mastery level learning of the key incident command tenets. The **COMMAND-Pro** course is delivered over a 10 hour training day.

HSS courses are high-speed and performance oriented. It is our goal to keep students in motion from the time they walk into the classroom until the whistle blows at the end of

the training day. **COMMAND-Pro** course is instructed by the world renowned staff of HSS's Talon Group Division. The instructional cadre of Talon Group is unprecedented in their combined incident command experience with instructors coming from Fire, Rescue, EMS, Law Enforcement, Military and PSD contract organizations.

Skills are verified by instructional cadre and documented to provide skill verification for student employers. HSS can custom build scenarios into the **COMMAND-Pro** course by organization request.

Let Health and Safety Sciences' mobile training come to wherever you need us to be!
