

# Tactical Security & Rescue Teams

Our tactical teams provide site security, technical rescue, and medical support for clients in austere locations, urban environments, chemical facilities, manufacturing plants, movie sets, as well as high profile political and social events. We can conduct operations to recover lost employees, family members, and/or assets; maritime activities; escort services; strike contingency, security/vulnerability assessments; and workplace security augmentation in response to valid threats of violence.

The group's tactical team advantage comes from a blend of qualified military, law enforcement, private security, and public safety professionals who hold some of the best qualifications in the business.

There are many companies offering "security services"; but rarely do they provide professional operators with the skillsets our team members maintain. Our teams can rapidly access locations by land-based vehicle, watercraft, dynamic rope entry, and scuba. We are self-reliant, self-supporting, and tactically proficient.

Teams are generally configured in 2, 4, 6, 8, 10 or 12 member units. Equipment packages are loaded based upon the mission, environment, and client request.

Talon Group delivers mission support, security and training services to government agencies and multinational corporations worldwide. In this role, the company not only ensures that it protects the physical well-being of its clients and employees, but also conducts its business with the proper respect for basic human rights principles.

Our business conduct is guided by the United Nations Universal Declaration of Human Rights and other applicable human rights documents and principles. These include the Chemical Weapons Convention, Convention Against Torture, Geneva Conventions (including Protocols Additional to the Geneva Conventions) and the Voluntary Principles on Security and Human Rights.
